

CME1202 & CME1402 SERVICE PARTS

This parts lists shows the service parts for the CME1402, CME1202 air cooled and the CME1402, CME1202 water cooled.

Check the model number of the machine to be certain of obtaining the correct part.

Note: These machines are built in various electrical configurations, including single phase, 3 phase and 50 Hz. Double check all electrical components to be sure of obtaining the correct part.

Included at the back of the parts list are the wiring diagrams.

SERVICE BULLETIN

Subject: CME1202 and CME1402 control circuit enhancement.

Beginning with May 1997 production (-11N), a thermostat and relay will have been added to all versions of the above two models. The benefit of this enhancement is that it greatly reduces the impact of ambient temperature changes - machines with this circuit will automatically adjust the harvest cycle length as needed to release all ice.

The thermostat and relay form the working components of a new circuit that, under certain low temperature conditions, by-passes the timer during the harvest cycle. The timer still operates as it has, except when the low temperature conditions are present.

There is a kit available to add this part to any prior CME1202, CME1402, CMS1202 or CMS1402. The part number is: **A37281-020**.

How it works (refer to schematic diagram on the back):

When the unit is harvesting under low temperatures, the thermostat, sensing the inlet tube of the accumulator, will be closed. This connects power to the relay coil, which then closes contacts 7-4, which parallel and by-pass the plug-in finish relay contacts 9-3. When this happens the timer motor will stop at the end of its normal harvest time but the machine continues to harvest until the suction line temperature warms up and the thermostat opens, cutting power to the relay coil and breaking the by-pass circuit. In effect, this means that the timer always determines the MINIMUM harvest time, and, when conditions are cold, the new control circuit determines the MAXIMUM harvest time, which will vary as needed.

Under normal conditions the new circuit does not affect the machine at all.

Two service parts are available: The thermostat, its part number is: 11-0521-21 and it includes the clamps and screws needed to attach it to the suction line. The relay part number is 12-2070-04.

A schematic diagram of a single phase remote is on the back of this bulletin. Three phase will be similar.
